1 Plaintiffs America Unites for Kids and Public Employees for Environmental
 2 Responsibility ("Plaintiffs") respectfully submit this memorandum of points and
 3 authorities in support of their ex parte application for expedited discovery under
 4 Fed. R. Civ. P. 34(a)(2).

5 INTRODUCTION

6 On March 23, 2015, Plaintiffs, two non-profit organizations, filed this
 7 citizen's suit action to restrain clear violations, in excess of 10,000 times the
 8 allowable limits, of the Toxic Substances Control Act ("TSCA") at the Malibu
 9 Middle and High School ("MHS") and Juan Cabrillo Elementary School ("JCES")
 10 (collectively, the "School"), which are part of the Santa Monica-Malibu Unified
 11 School District (the "District"). Defendants are administrators and members of the
 12 District's Board of Education. Plaintiffs are filing a First Amended Complaint
 13 ("FAC") this date.

14 The School is contaminated with polychlorinated biphenyls ("PCBs"), a
 15 "highly-toxic carcinogen." *Midlantic National Bank v. New Jersey Department of*
 16 *Environmental Regulation*, 474 U.S. 494, 497 (1986). TSCA and the regulations
 17 thereunder (the "PCB Regulations") prohibit the use of materials containing PCBs at
 18 concentrations of 50 parts per million ("ppm") or greater, whereas the results of the
 19 limited testing conducted to date show levels up to 570,000 ppm.

20 Concurrently with the filing of this application, Plaintiffs are also filing a
 21 motion for preliminary injunction, seeking the prompt removal of all caulk in those
 22 rooms which Defendants' testing has shown contain 50 ppm or more PCBs.
 23 However, only a small portion of the total number of rooms in the Malibu School
 24 (estimated at 80 regularly occupied rooms) has been tested for PCBs in building
 25 materials, and it is a virtual certainty that many of the so-far untested rooms built
 26 with the same building materials also have illegal levels of PCBs. Defendants have
 27 taken the position that they will not test any more caulk or other building materials,
 28 but that they will remediate any such materials found to violate TSCA. Thus,

1 allowing Plaintiffs to test materials in the School is necessary to support Plaintiffs'
 2 claim that the illegal PCB-contamination is widespread and should be removed.

3 Allowing Plaintiffs access to the School now instead of after the Scheduling
 4 Conference will allow the prompt identification of illegal PCBs in rooms not already
 5 tested. This will enable Plaintiffs to obtain, on an expedited basis, preliminary
 6 injunctive relief requiring remediation of the newly-identified, illegal PCBs before
 7 the beginning of the 2015/16 school year so that teachers and students do not have
 8 to study and learn in an illegal, dangerous environment for another year.¹

9 ARGUMENT

10 I. Discovery is Appropriate under Rule 34(a)(2).

11 Fed. R. Civ. P. 34(a) ("Rule 34(a)") provides that:

12 A party may serve on any other party a request within the scope of Rule
 13 26(b):

14

15 (2) to permit entry onto designated land or other property possessed or
 16 controlled by the responding party, so that the requesting party may
 17 inspect, measure, survey, photograph, test, or sample the property or
 18 any designated object or operation on it.

19 This Rule has often been applied to permit environmental testing where
 20 environmental contamination or damage is alleged. *E.g. Martin v. Reynolds Metal*
 21 *Corp.* 297 F.2d 49, 57 (9th Cir. 1961) (permitting pre-litigation discovery for
 22 anticipated case alleging damage from pollution on cattle ranch, including testing
 23 samples of forage, feed, air, water and soil); *Cal. Sportfishing Protection Alliance v.*
 24

25
 26 ¹ See the discussion of the potential for exposure and the health risks of PCBs in the
 27 First Amended Complaint at ¶¶ 34-49, and the accompanying Declaration of Paul
 28 Rosenfeld, Ph.D. ("Rosenfeld Decl.") at ¶¶ 9-12, 14, 46. Mr. Rosenfeld is an
 environmental chemist retained by Plaintiff America Unites as a consultant in this matter.

1 *Chico Scrap Metal, Inc.*, 2014 U.S. Dist. LEXIS 61069 at *4-5, 2014 WL 1664936
 2 (E.D. Cal. April 25, 2014) (testing of stormwater discharges for metals and PCBs);
 3 *United States v. Acquest Wehrle*, 2010 U.S. Dist. LEXIS 41263 at *1 (W.D.N.Y.
 4 April 27, 2010) (permitting entry on land to conduct ecological and hydrological
 5 sampling and testing in Clean Water Act citizen suit); *Coldani v. Hamm*, 2008 U.S.
 6 Dist. LEXIS 79608 at *3, 2008 WL 3992719 (E.D. Cal. Aug. 25, 2008) (permitting
 7 testing of ranch's soil, sediment and groundwater for contamination); *Ark. Game &*
 8 *Fish Comm'n v. United States*, 74 Fed. Cl. 426, 434 (Fed. Cl. 2006) (allowing
 9 installation of instruments to measure water levels in case alleging damage to
 10 natural resources); *Teer v. Law Eng'g & Envtl. Services*, 176 F.R.D. 206, 207
 11 (E.D.N.C. 1997) (allowing access to property to take soil and water samples, and
 12 other things necessary to determine the extent of pollution); *United States v. Moss-*
 13 *American*, 1977 U.S. Dist. LEXIS 14908 at *5-*7 (E.D. Wis. July 20, 1977) (entry
 14 onto land to take surface and core samples including samples from earthen floors of
 15 buildings).

16 As Rule 34(a) indicates in the portion quoted above, the scope of discovery
 17 for entry into land to take samples, etc. encompasses the full scope of discovery
 18 under Fed. R. Civ. P. 26(b) ("Rule 26(b)"). That Rule, in turn, provides in part that:

19 Parties may obtain discovery regarding any nonprivileged matter that is
 20 relevant to any party's claim or defense Relevant information need
 21 not be admissible at the trial if the discovery appears reasonably
 22 calculated to lead to the discovery of admissible evidence.

23 Rule 26(b)(1).

24 The Supreme Court has made clear that the discovery rules "are to be
 25 accorded a broad and liberal treatment." *Hickman v. Taylor*, 329 U.S. 495, 507
 26 (1947). As with the other discovery rules, Rule 34(a)(2) has a "broad scope,"
 27 *Sportfishing Protection*, 2014 US. Dist. LEXIS 61069 at *6, and "is designed to
 28 permit 'the broadest sweep of access.'" *Versatile Metals v. Union Corp.*, 1986 U.S.

1 Dist. LEXIS 21801 at *3, 1986 WL 8720 (E.D. Pa. August 7, 1986) (quoting Wright
2 & Miller, Federal Practice and Procedure § 2206 at 607 (1970)).

3 The discovery sought here easily meets the relevance criteria of Rule 26, in
4 that it is essential to determine to what extent building materials at the Schools
5 violate TSCA as alleged. After the initial testing of building materials in ten rooms,
6 Defendants have refused to test any more building materials, and Plaintiffs have
7 been able to obtain samples for independent testing in only a relatively small
8 number of additional rooms.² When Defendants' consultants did validation testing
9 of Plaintiffs' so-called "independent" testing, in nine of the independently-tested
10 rooms (and a hallway) they found that the levels of PCBs were uniformly above
11 legal limits, and in fact much higher than even the independent testing had found.
12 *Id.* at ¶ 129. There is every indication that illegal PCB contamination is widespread
13 at the Malibu Schools based upon the existing test results and the fact that the other
14 pre-1980 rooms were constructed around the same time and with the same building
15 materials as rooms which have already tested above legal limits. Thus, there is
16 every reason to believe that testing of the remainder of pre-1980 rooms will yield
17 relevant evidence regarding TSCA violations in these rooms. *See, e.g.,* Rosenfeld
18 Decl. ¶43:

19 "I am informed that the School has a total of
20 approximately 80 rooms. Caulk in only about 30 of the
21 rooms has been tested to date. Based on the results to
22 date—17 rooms have caulk with PCBs over the regulatory
23 limit--it is a virtual certainty that many of the untested
24 rooms which teachers and students are using daily contain
25 PCB contaminated caulk in excess of the legal limit. I base
26

27 ² See FAC ¶¶ 69, 70, 80, 82, 83, 103, 109.
28

1 this conclusion, on among other things: (a) my
2 professional experience in these types of investigations;
3 (b) the high percentage of caulk with PCBs over 50 ppm in
4 the rooms tested; (c) the fact that rooms containing PCB-
5 contaminated caulk are found throughout the Schools; (d)
6 the magnitude of the PCBs found in the caulk; (e) the lack
7 of any reason to believe that caulk used in the tested rooms
8 was different than the caulk used in adjacent, untested
9 rooms; and (f) the lack of any apparent reason to believe
10 that tested rooms are not representative of the untested
11 rooms.”

12 Limitations are placed on such relevant discovery only when the court
13 determines that the discovery is:

- 14 (i) unreasonably cumulative or duplicative, or can be obtained from
15 some other source that is more convenient, less burdensome, or
16 less expensive;
17 (ii) the party seeking discovery has had ample opportunity to obtain
18 the information by discovery in the action; or
19 (iii) the burden or expense of the proposed discovery outweighs its
20 likely benefit, considering the needs of the case, the amount in
21 controversy, the parties’ resources, the importance of the issues
22 at stake in the action, and the importance of discovery in
23 resolving the issues.

24 Rule 26(b)(2)(C).

25 None of these circumstances apply here. This discovery is not cumulative or
26 duplicative, and Plaintiffs had no other opportunity to obtain this discovery, since no
27 other discovery has occurred. There is no other way these results can be obtained.
28

1 Plaintiffs intend to conduct the discovery at their own expense in a manner that will
2 not disrupt or damage the Malibu Schools.

3 As set forth in Plaintiffs' First Request to Enter Land Pursuant to Fed. R. Civ.
4 P. 34(a)(2), attached as Exhibit 6 to the accompanying Declaration of Charles Avrith
5 ("Avrith Decl."), Plaintiffs plan to use qualified professionals to take up to four
6 small caulk samples in each pre-1980 regularly occupied room. They will also do
7 spot sampling of joint compound and other building materials which might contain
8 PCBs, either because they were initially manufactured with PCBs, or because they
9 became contaminated with PCBs from nearby PCB-containing materials. The
10 samples will be placed in sealed containers and sent for laboratory analysis, and thus
11 have no potential to harm anyone at the School. All of the initial testing is expected
12 to be done in a two and a half day period, from Friday afternoon after school lets out
13 until the end of Sunday, April 17-19, 2015. If the initial testing is not completed in
14 one weekend, it will be completed the following weekend of April 24-26.³

15 The sampling and testing will be performed at Plaintiffs' expense,⁴ without
16 any damage to the School or any risk to its occupants, and during a short period
17 when school is not in session.

18 II. There is Good Cause for the Grant of Expedited Discovery

19 Unless the parties so stipulate, or the court so orders, discovery may not be
20 propounded prior to the parties' conference under Rule 26(f), which must take place
21 at least 21 days before the initial Case Management Conference. Fed. R. Civ. P.
22 26(d), (f).

23
24 ³ If the spot sampling of non-caulk materials reveals illegal levels of PCBs,
25 necessitating a more comprehensive testing of these materials, Plaintiffs'
26 representatives will need to return to the School.

27 ⁴ Plaintiffs will request reimbursement of its sampling and testing costs under
28 15 U.S.C. §2619(e) at the end of the case.

1 However, courts may permit expedited discovery before the Rule 26(f)
 2 conference upon a showing of good cause. ... Good cause exists where
 3 the need for expedited discovery, in consideration of the administration
 4 of justice, outweighs the prejudice to the responding party.
 5 *Countrywide Fin. Corp. Derivative Litig.*, 542 F. Supp. 2d 1160, 1179 (C.D. Cal.
 6 2008) (citations and internal quotation marks omitted); *accord Apple Inc. v.*
 7 *Samsung Elecs. Co.*, 768 F. Supp. 2d 1040, 1044 (N.D. Cal. 2011). Moreover,
 8 Judge Percy's Standing Order advises counsel to begin to actively conduct
 9 discovery before the Scheduling Conference. Standing Order ¶ 3 (b).

10 Here there is a need for expedited discovery and no prejudice to Defendants.
 11 As noted above, there is good cause because teachers and students are continuing to
 12 be exposed to illegal levels of PCBs, which accumulate in their bodies, and are more
 13 likely to cause illness the longer exposure continues. FAC ¶¶ 13, 16, 34, 39. 41-49;
 14 Rosenfeld Decl. at ¶46 and Ex. 28, p. 2. *See also Utility Solid Waste Activities*
 15 *Group v. EPA*, 236 F. 3d 749, 750 (D.C. Cir. 2001) ("PCBs are also carcinogenic
 16 and toxic, and may cause immune system suppression, liver damage, endocrine
 17 disruption in humans and animals and skin irritations. These dangers are
 18 compounded by the remarkable stability of PCB compounds, which bioaccumulate
 19 in fatty tissue and are readily absorbed through the skin and respiration; as well as
 20 through ingestion of animals exposed to PCBs.").

21 Without expedited discovery, Plaintiffs will need to wait 21 days for
 22 Defendants to answer the Complaint and additional time until after a Rule 26(f)
 23 conference can be scheduled and held, and then Defendants will have 30 days to
 24 respond to the Rule 34 request. Rule 34(b)(2)(A). In other words, several months
 25 could elapse before this sample collection and testing could occur. Expedited
 26 discovery is needed so that students and staff can avoid months of additional
 27 exposures to PCBs, and to inform the Court's consideration of Plaintiffs' requests
 28 for preliminary and permanent injunctive relief.

1 Plaintiffs will be entitled to this discovery in the normal course, and the
 2 burden, if any, on Defendants will be not be any different if the discovery is done
 3 now versus later. Conducting the discovery earlier will ensure the more prompt
 4 protection of the health and safety of teachers and students, and allow this litigation
 5 to progress more expeditiously.

6 In determining whether good cause exists, factors commonly considered by
 7 courts include, but are not limited to:

8 (1) whether a preliminary injunction is pending; (2) the breadth of
 9 the discovery requests; (3) the purpose for requesting the expedited
 10 discovery; (4) the burden on the defendants to comply with the
 11 requests; and (5) how far in advance of the typical discovery process
 12 the request was made.

13 *American LegalNet, Inc. v. Davis*, 673 F. Supp. 2d 1063, 1067 (C.D. Cal.
 14 2009).

15 Here, all of these factors weigh in favor of the grant of expedited discovery.
 16 A motion for preliminary injunction is being filed today concerning the remediation
 17 of rooms already found to be in violation of TSCA, and an additional preliminary
 18 injunction may be filed based on the results of the expedited discovery, if, as
 19 expected, it finds additional violations. The purpose of the discovery is to obtain
 20 evidence concerning the central issue in this case. The discovery requests are
 21 narrow enough to be completed with a few days of sampling at times when school is
 22 not in session. There is essentially no burden on the Defendants, and while the
 23 discovery is being requested at the outset of the case, as noted above, there is no
 24 additional burden inherent in doing it now versus later, and there is an important
 25 benefit in terms of protecting public health.

26 III. Defendants' Opposition Is Baseless

27 Based on discussions between counsel, Plaintiffs anticipate that Defendants
 28 will argue that additional testing of caulk and other building materials should not be

1 permitted because the U.S. Environmental Protection Agency (“EPA”) has directed
 2 them not to test further building materials for PCBs, but only air and dust to
 3 determine if EPA’s health guidelines are exceeded. (Avrith Decl. ¶5 and Ex. 1
 4 thereto) This is simply not the case.

5 Although EPA did state at one point that it “did not recommend additional
 6 testing of caulk” unless air and dust samples failed to meet EPA’s health guidelines
 7 (Avrith Decl. Ex. 3 (emphasis added)), EPA never directed Defendants not to do
 8 additional caulk testing, and in fact anticipated that they might do so. In an October
 9 31, 2014 letter from the EPA Region 9 Administrator to Sandra Lyon (Avrith Decl.
 10 Ex. 4), EPA stated the following:

11 “As you know, the federal Toxic Substances Control Act (TSCA) and
 12 implementing regulations prohibit the use of caulk containing PCBs at
 13 or above 50 ppm. When such caulk is found, it must be removed and
 14 disposed of in accordance with TSCA.”

15 EPA then acknowledged the School District’s plan to remove caulk then currently
 16 known and verified to contain illegal levels of PCBs, as well as “any newly
 17 discovered PCB-containing caulk . . .”. *Id.*

18 Thus, EPA expressed its understanding that Defendants, or someone else,
 19 could perform tests to “newly discover[] PCB-containing caulk,” and that if that
 20 testing revealed PCB levels above legal limits, removal would be required. In fact,
 21 the District did do further testing of caulk and determined that nine more rooms and
 22 a hallway violated TSCA, and so informed EPA. FAC ¶¶128-29.

23 In addition, EPA has repeatedly disclaimed any regulatory oversight of the
 24 District’s testing of materials for PCBs, so it could not possibly prohibit such
 25 testing. On June 4, 2014, EPA submitted comments to the District on its PCB plans
 26 which clarified that EPA’s “formal role” would be limited to approving and
 27 overseeing removal plans when caulk above regulatory limits had already been
 28 identified, as well as providing technical assistance. (Avrith Decl. ¶¶6 and Ex. 5

thereto) *See also* Avrith Decl. Ex. 4 (stating that testing and removal of caulk “is not required to be part of the enclosed approval,” which applied only to addressing the substrate in contact with caulk that was to be removed).

Therefore, Defendants cannot legitimately claim that they have been prohibited from further caulk testing by EPA. Even if that were the case, which it is not, it would not mean that Plaintiffs are not entitled to discovery under Rule 34 to conduct such testing. The purpose of TSCA’s citizen suit provision is to allow citizens to enforce TSCA when EPA is not doing so, and nothing in Rule 34 would prevent discovery of information that is potentially relevant to a claim of ongoing violations of law in a citizen suit simply because the enforcement agency is not seeking that information itself. *See Gwaltney of Smithfield v. Chesapeake Bay Found.*, 484 U.S. 49, 62 (1987) (The central purpose of citizens’ suits is to allow citizens “to abate pollution when the government cannot or will not command compliance”).

CONCLUSION

For the reasons set forth above, this Court should grant Plaintiffs’ Application for expedited discovery in accordance with the discovery request attached as Exhibit 6 to the Avrith Decl.

Respectfully submitted,
